

# SINGLE USE VALVE BASKET

The National Endoscopy Programme – Decontamination Standards for Flexible Endoscopes (March 2008) state that Reusable Valves and Other Detachable Parts must be processed in the AER with their corresponding endoscope.

## “Valves including flushing valves and removable parts are kept with the endoscope to form a unique set of equipment”

The Medical Innovations single use **Valve Basket** (Patent Pending) has been specifically designed to ensure effective, safe and easy decontamination of reusable endoscope valves. With its simple twist loop design **Valve Basket** has been designed to stay with your endoscope throughout the reprocessing cycle.

Place valves into basket

Close valve basket

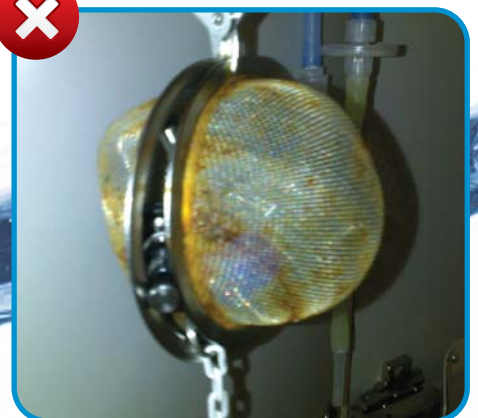

Attach basket to endoscope

### Features of Valve Basket:

- Click lock catch, keeping valves secure and not allowing inadvertent re-use
- Simple twist loops that attach the basket to the scope
- Easy flow design allows effective flow of detergents, disinfectants and water around the valves
- Inexpensive, lightweight and easy to store
- Single use design reducing the risk of cross contamination

Medical Innovations **Valve Basket** has been purpose designed for the easy reprocessing of valves and is a major step forward over existing 'tea strainers' and 'metal baskets' which can become a haven for gross debris and bio burden.
